

THE COSMIC JOKE

“The total number of minds in the universe is one.” - Erwin Schrodinger.

The universe is the secondary result of one movement disappearing at the speed of gravity.

The movement is **Planck's constant**.

Planck's constant is a proposal that upset to the classical order.

The mathematics were irrefutable.

Planck received the Noble Prize.

In due course Planck's work was assimilated and misrepresented to become the quantum mechanics we know today.

“Even Planck tried to make it fit: “My unavailing attempts to somehow reintegrate the action quantum into classical theory extended over several years and caused me much trouble.” Several years later, other physicists like Rayleigh, Jeans, and Lorentz set Planck's constant to zero in order to align with classical physics, but Planck knew well that this constant had a precise nonzero value. “So much the worse for the facts if they don't fit.”

- Alexander Wilhelm von Brill - held a chair at the University of Tübingen, where Max Planck was among his students.

What was not known then but is now known to me and some others, is that the universe is subject to an **emergent principal** that is higher than all, it is all as one; the changing sum of who we think we are.

Planck's immortal constant opened the door to discovering this higher Principal.

In due course Planck's entire family was destroyed and his work mutilated into tangential forms that can never come full-circle.

Planck's constant is the same movement going in/out of **eternity**.

The rotation produces the universe as secondary issue - drawing energy on-demand from the eternal source.

To find the cause of Planck's constant one must isolate the movement and consider it practically...

Resistance causes movement: the movement measured by Planck was caused by resistance but this resistance is too an emotion and so, it also has energy.

This 'least resistance' is the cause of all causes – the **emergent principal**.

Primal cause is high and above as the **antithesis of God**; so high it is hidden in full view – everywhere at once!

The particle is so unimaginably small it escaped Planck's calculations.

Planck's constant is: **$6.62607004 \times 10^{-34} \text{ m}^2 \text{ kg/seconds}$** .

The difference between Planck's constant and **6.66** is the energy of the emergent principal – a cosmic joke.

The emergent principal is **thought** and we are its movement; one and the same.

"Same, same, but different" – Buddhist saying.

Thought is the **sum** of who we think we are in every moment; everywhere at once ordering its own to protect the status quo.

"Ultimately, the entire universe...has to be understood as a single undivided whole." - David Bohm
