

THE ETERNAL STREAM

Isaac Newton's $F=ma$ is so simple he had to invent calculus to explain it.

Maleva Maric was inspired by Newton and reduced complexity to simplicity with her THEORY OF RELATIVITY.

Max Planck explained Newton's $F=ma$ as a single particle disappearing to ETERNITY. This particle of energy is the quantum.

Nikola Tesla put the above information to practical use.

The eternally recurring particle is an alternating **positive and negative** whose origin is the resistance that twisted ETERNITY thereby creating the first energy.

The universe is the same ETERNAL twist repeating until the monkey is off its back - so to speak.

The challenge:

The original energy, because it is the smallest particle, is everywhere at once.

Discovering the smallest particle and recognizing its advantage in terms of access is the last frontier before we enter the eternal stream that is **F=ma**.

"You have heard these things; look at them all. Will you not acknowledge them? From now on I will tell you of new things, hidden things unknown to you." Isaiah 48:6
